Experience Financial Process Efficiency

Bill.com streamlines accounts payable and accounts receivable, saving you 36 business days on average annually and providing total visibility and control.

Discover solutions to your team's biggest problems

Gain greater internal control and visibility. Know which bills are running behind, and who is taking their time to review and approve. You're in control at every step of your process.

Reduce manual data entry and inefficient processes. Bill.com auto-enters invoice data and PO number for your review, routes bills to approvers, and syncs with your accounting software.

Never enter the same payment twice. Bill.com automatically syncs with your accounting system to keep your records consistent and save you from entering payment data twice.

Eliminate manual routing of invoices. Customize role-based access and assign bill and payment approval workflows. Based on the rules you set, Bill.com automates the workflow for you.

Never lose an invoice. Unlimited document storage and management lets you see original invoices and review notes, approvals, payments, and remittance details for every transaction with transparent, time-stamped audit trails.

Eliminate discrepancies and exceptions. Bill.com uses pattern and human error recognition to monitor invoices, bills, and payments for duplicates and outliers, reducing human error and giving you more control.

Bring more flexibility and efficiency to the way you pay and get paid

AP Automation

Pay vendors how they want to be paid:

- Vendor Direct virtual card program
- International wires (USD or local currencies)
- ACH
- Check
