

WAREHOUSE INSIGHT

for Microsoft Dynamics 365 Business Central

Improve warehouse accuracy and boost efficiency with mobile device and barcode integration.

Warehouse Insight is a comprehensive warehouse management system (WMS) that seamlessly integrates with Microsoft Dynamics 365 Business Central. The solution empowers warehouse managers, inventory personnel, and supply chain professionals with real-time access to inventory data and warehouse management operations. Warehouse Insight supports various industry-standard barcode scanners and mobile terminals, offering an adaptable solution tailored to meet unique business requirements.

Key Benefits of Warehouse Insight for Enhanced Operational Efficiency and Adaptability

- **Seamless System Integration:** Warehouse Insight integrates seamlessly with Microsoft Dynamics 365 Business Central, reducing data discrepancies and enhancing workflow.
- **Real-time Inventory Management:** Real-time inventory and operations management is available via handheld devices, reducing manual data entry and enhancing decision-making.
- **Equipment Compatibility:** Warehouse Insight is compatible with various industry-standard barcode scanners and mobile terminals, allowing flexibility in equipment choice and utilization of existing infrastructure.
- **User-friendly Interface:** It provides a user-friendly interface across all Business Central location configurations, enabling quicker user adoption and improved productivity.
- **Efficient Tracking and Compliance Reporting:** The system allows efficient lot/serial number tracking and offers regulatory compliance reporting, leading to streamlined processes and quality assurance.
- **Streamlined Warehouse Operations:** Warehouse Insight streamlines warehouse operations such as palletizing, packaging, and license plating, leading to improved efficiency and better organization of inventory.
- **Customizable Solution:** Its built-in App Designer allows customization to cater to specific business needs, thereby increasing the adaptability of the solution.

Typical Users:

Warehouse managers

Inventory managers

Material handlers

Shippers and receivers

Forklift operators

Warehouse supervisors

Order pickers

Quality control inspectors

Supply chain managers

WAREHOUSE INSIGHT

Full integration with Microsoft Dynamics 365 Business Central

Seamless connectivity with your existing ERP system, reducing data discrepancies and ensuring smooth workflows.

Real-time access to inventory, production data, and management operations using handheld devices

Enhances decision-making, optimizes warehouse activities, and reduces the need for manual data entry or tracking.

Support for industry-standard barcode scanners and mobile terminals, including Datalogic, Zebra, and Honeywell

Allows compatibility with a wide range of hardware, providing flexibility in equipment choice and leveraging existing infrastructure.

Consistent user interface across all location configurations in Business Central

Reduces the learning curve for users, enabling quick adoption and improving productivity across multiple warehouse setups.

Efficient lot and serial number tracking, along with regulatory compliance reporting

Streamlines the tracking process, helps maintain quality standards, and ensures compliance with industry regulations.

Streamlined warehouse operations with palletizing, packaging, and license plating

Improves operational efficiency, reduces manual tasks, and ensures better organization of warehouse inventory.

Built-in App Designer for custom function development

Offers the ability to create custom features tailored to specific business needs, increasing the adaptability of the solution.

Comprehensive inventory management, including picks, put-aways, movements, and counts

Ensures accurate inventory control, minimizes stock discrepancies, and optimizes warehouse space utilization.

Simplified shipping and receiving processes with direct scanning to sales and purchase documents

Speeds up order processing, reduces manual data entry errors, and improves overall operational efficiency.

Flexible offline processing capabilities

Allows for continued warehouse operations even during network downtime, ensuring minimal disruptions to productivity.

Multi-dimensional barcode support and Electronic Data Interchange (EDI) integration

Facilitates better data management and streamlined communication with trading partners, improving supply chain efficiency.

Compatibility with Android and Windows operating systems and easily configurable settings:

Provides flexibility in device choice, ensuring a smooth user experience and easier customization to suit specific business requirements.
